

LEED for Neighborhood Development

What is LEED for Neighborhood Development?

LEED for Neighborhood Development is a green neighborhood certification program that integrates the principles of smart growth, new urbanism, and green building into the first national program for neighborhood design. It is being developed by USGBC in partnership with the Congress for the New Urbanism (CNU) and the Natural Resources Defense Council (NRDC).

What is the significance of LEED for Neighborhood Development certification?

LEED for Neighborhood Development recognizes development projects that successfully protect and enhance the overall health, natural environment, and quality of life of our communities. The certification system encourages smart growth and new urbanist best practices, promoting the location and design of neighborhoods that reduce vehicle miles traveled and communities where jobs and services are accessible by foot or public transit. It promotes more efficient energy and water use—especially important in urban areas where infrastructure is often overtaxed.

What is the status of the LEED for Neighborhood Development pilot program?

The LEED for Neighborhood Development pilot program is well underway. A call for pilot projects took place between in early 2007. Nearly 240 projects from 39 states and 6 countries are now participating in the pilot program. These projects are in the process of neighborhood planning and will submit documentation to USGBC in order to become LEED certified. The information learned during the pilot program will be used to make further revisions to the rating system and certification process, and the resulting draft certification system will be posted for public comment before it is submitted for final approvals and balloting as per USGBC's consensus process.

What can projects do to get certified if they missed the deadline for participation in the pilot program?

Although the period for applying to be in the pilot program has passed, projects will be able to participate in the post-pilot program, which will be universally available to interested markets and should launch in mid-2009. LEED for Neighborhood Development enables projects to certify at both very early and very late stages of development, so the vast majority of projects interested in the pilot program should also be able to utilize the post-pilot program. For now, projects can look to the pilot certification system and other information that is posted at www.usgbc.org/leed/nd for general guidance as to what LEED for Neighborhood Development is about, although the certification system will change somewhat as a result of the pilot program.

How do the other LEED rating systems interact with LEED for Neighborhood Development?

Points are available within the LEED for Neighborhood Development certification system for including LEED Certified buildings and for integrating green building practices within the buildings on the project site. These credits relate to energy efficiency, reduced water use, building reuse, recycled materials and heat island reduction.

What are the LEED for Neighborhood Development Core and Corresponding Committees?

The core committee does the day-to-day work of developing the rating system, while a larger corresponding committee is also established for every LEED system so that interested stakeholders can participate in its development. The corresponding committee listserv enables a wider group of experts and interested parties to stay updated and receive notification of opportunities to provide feedback.

Corresponding committee members receive minutes from core committee meetings and other announcements.

I would like to be involved with LEED for Neighborhood Development. How can I join the corresponding committee?

The corresponding committee is open to USGBC members and nonmembers but there are different ways to join:

- USGBC members can visit www.usgbc.org, log into Your Account, and subscribe to the committee listserv.
- Others can send an e-mail to nd@committees.usgbc.org requesting to be added to the corresponding committee.

What is the timeline for developing LEED for Neighborhood Development?

2007: LEED for Neighborhood Development pilot program launches

2008: Committee revises LEED for Neighborhood Development Rating System, public comment periods begin

2009: LEED for Neighborhood Development (full post-pilot program) ballot and launch
